Attny. Dckt. No. 14846-36

Amendments to the Claims:

The following listing of claims replaces all prior versions, and listings, of claims in the present application.

Listing of the Claims:

1. (currently amended) A method for predicting the number of software defects for an upcoming software release, comprising the steps of:

determining the relative size of the upcoming software release with respect to a baseline software release; and

forecasting the number of software defects for the upcoming software release based on the relative size of the upcoming software release and the number of observed software defects for the baseline software release;

wherein determining the relative size of the upcoming software release includes the steps of:

determining the number of new test requirements for the upcoming software release;

determining the number of test requirements for the baseline software release; and

dividing the number of new test requirements for the upcoming software release by the number of test requirements for the baseline software release.

2. (canceled)

3. (original) The method of claim 1, wherein the forecasting step includes multiplying the number of observed software defects for the baseline software release by the relative size of the upcoming software release.

4. (original) The method of claim 1, wherein the forecasting step includes multiplying the number of observed software defects for the baseline software release by the sum of the relative size of the upcoming software release and a regression defect factor.

5. (original) The method of claim 1, wherein the forecasting step includes multiplying the number of observed software defects for the baseline software release by the sum of the relative size of the upcoming software release and a refactoring factor.

6. (original) The method of claim 1, further including determining a quality measurement for the upcoming software release based on the actual number of software defects

Appln. No. 10/718,400
Amny. Dckt. No. 14846-36

for the upcoming software release relative to the forecasted number of software defects for the upcoming software release.

7. (original) The method of 6, wherein the quality measurement is used by a project management system.

8. (original) The method of claim 1, wherein number of software defects for the upcoming software release is used by a project management system.

9. (original) The method of claim 1, wherein information used to forecast the software defects is graphically depicted.

10. (original) The method of claim 1, wherein the baseline software release is selected by a user.

11. (currently amended) A system for predicting the number of software defects for an upcoming software release, comprising:

an input device for obtaining information regarding an upcoming software release and a baseline software release;

a processor for determining the relative size of the upcoming software release with respect to a baseline software release and forecasting the number of software defects for the upcoming software release based on the relative size of the upcoming software release and the number of observed software defects for the baseline software release; and

an output device for outputting the forecasted number of software defects for the upcoming software release;

wherein the information obtained by the input device includes the number of new test requirements for the upcoming software release and

the number of test requirements for the baseline software release, and the processor determines the relative size of the upcoming software release by dividing the number of new test requirements for the upcoming software release by the number of test requirements for the baseline software release.

12. (canceled)

Appln. No. 10/718,400

Attmy. Dckt. No. 14846-36

13. (original) The system of claim 11, wherein the processor forecasts the number of software defects for the upcoming software release by multiplying the number of observed software defects for the baseline software release by the relative size of the upcoming software release.

14. (original) The system of claim 11, wherein the processor forecasts the number of software defects for the upcoming software release by multiplying the number of observed software defects for the baseline software release by the sum of the relative size of the upcoming software release and a regression defect factor.

15. (original) The system of claim 11, wherein the processor forecasts the number of software defects for the upcoming software release by multiplying the number of observed software defects for the baseline software release by the sum of the relative size of the upcoming software release and a refactoring factor.

16. (original) The system of claim 11, wherein the processor further determines a quality measurement for the upcoming software release based on the actual number of software defects for the upcoming software release relative to the forecasted number of software defects for the upcoming software release

17. (original) The system of 16, wherein the quality measurement is used by a project management system.

18. (original) The system of claim 11, wherein number of software defects for the upcoming software release is used by a project management system.

19. (original) The system of claim 11, wherein the output device is configured to graphically depict information regarding the forecasted number of software defects.

20. (original) The system of claim 11, wherein the input device is configured to allow a user to select the baseline software release.

21. (currently amended) A program storage device readable by a machine, tangibly embodying a program of instructions executable on the machine to perform method steps for predicting the number of software defects for an upcoming software release, the method steps comprising:

Appl. No. 10/718,400

Atty. Dckt. No. 14846-36

determining the relative size of the upcoming software release with respect to a baseline software release; and

forecasting the number of software defects for the upcoming software release based on the relative size of the upcoming software release and the number of observed software defects for the baseline software release

wherein determining the relative size of the upcoming software release includes the steps of:

determining the number of new test requirements for the upcoming software release;

determining the number of test requirements for the baseline software release; and

dividing the number of new test requirements for the upcoming software release by the number of test requirements for the baseline software release.

22. (canceled)
